

We are driven to deliver the products our customers really want.

Founded in 1983, Spectrum Controls continues to be the premier manufacturer of electronic hardware and related software products for the industrial controls marketplace.

Products fall into three major categories: input/output modules, human-machine interfaces and communications devices. Because of the close alliance relationships with the major automation and controls manufacturers, Spectrum Controls' products seamlessly interface with, enhance and complement their automation and controls product lines.

Sales are channeled through a network of stocking distributors as well as manufacturers representatives and select direct customers. Users of Spectrum Controls' products include Fortune 500 companies, government agencies and other manufacturers of industrial controls products—both domestic and international. Spectrum Controls' products are successfully deployed in water/wastewater, utility/power, oil/petrochemical, mining/quarrying, pulp/paper, food/beverage, material handling, biopharmaceuticals and a variety of other industries.

Spectrum Controls' corporate headquarters is located in Bellevue, Washington, USA. For more information, visit our Web site at www.spectrumcontrols.com, email spectrum@spectrumcontrols.com or telephone 425-746-9481.
