
2080 Memory Backup and High Accuracy RTC Plug-In Module
Catalog Number: 2080-SDMEMRTC-SC

SPECTRUM CONTROLS
Important Notes
1. Please read all the information in this owner’s guide before installing the product.
2. The information in this owner's guide applies to hardware Series A and firmware version 1.1 or later.
3. This guide assumes that the reader has a full working knowledge of the relevant processor.

Notice
The products and services described in this owner's guide are useful in a wide variety of applications. Therefore, the user and others responsible for applying the products and services described herein are responsible for determining their acceptability for each application. While efforts have been made to provide accurate information within this owner's guide, Spectrum Controls, Inc. assumes no responsibility for the accuracy, completeness, or usefulness of the information herein.

Under no circumstances will Spectrum Controls, Inc. be responsible or liable for any damages or losses, including indirect or consequential damages or losses, arising out of either the use of any information within this owner's guide or the use of any product or service referenced herein.

No patent liability is assumed by Spectrum Controls, Inc. with respect to the use of any of the information, products, circuits, programming, or services referenced herein.

The information in this owner's guide is subject to change without notice.

Limited Warranty
Spectrum Controls, Inc. warrants that its products are free from defects in material and workmanship under normal use and service, as described in Spectrum Controls, Inc.’s literature covering this product, for a period of 1 year. The obligations of Spectrum Controls, Inc. under this warranty are limited to replacing or repairing, at its option, at its factory or facility, any product which shall, in the applicable period after shipment, be returned to the Spectrum Controls, Inc. facility, transportation charges prepaid, and which after examination is determined, to the satisfaction of Spectrum Controls, Inc. to be thus defective.

This warranty shall not apply to any such equipment which shall have been repaired or altered except by Spectrum Controls, Inc. or which shall have been subject to misuse, neglect, or accident. In no case shall the liability of Spectrum Controls, Inc. exceed the purchase price. The aforementioned provisions do not extend the original warranty period of any product which has either been repaired or replaced by Spectrum Controls, Inc.

INDEX .......................................................................................................................................................... I-1
Preface

Read this preface to familiarize yourself with the rest of the manual. This preface covers the following topics:

- Who should use this manual
- How to use this manual
- Related documentation
- Technical support
- Documentation
- Conventions used in this manual

Who Should Use This Manual

Use this manual if you are responsible for designing, installing, programming, or troubleshooting control systems that use the Micro800™ Memory Backup and High Accuracy RTC Plug-In Module.

NOTE

Before you access any equipment or begin to install any IO modules, review all safety material and warnings in the Micro850 and Micro870 Programmable Controllers User Manual. Be sure to review the warnings provided in this document before you start installing a module in a system.

Keep in mind that Version 2.1 of the module firmware is required for operation with 870 controllers.

How to Use This Manual

As much as possible, we organized this manual to explain, in a task-by-task manner, how to install, configure, program, operate and troubleshoot a control system using the Micro800™ Memory Backup and High Accuracy RTC Plug-In Module.

Related Documentation

The table below provides a listing of publications that contain important information about Allen-Bradley Micro800 Expansion I/O Module systems.

Chapter 1
Module Overview

The 2080-SDMEMRTC-SC Expansion I/O module is a microSD card and real-time clock (RTC) module designed to add clock and removable memory to Micro800 Systems.

The module provides a microSD memory card slot that is accessible when the module is installed on the Micro830/850/870 controller. This module has a mechanical feature that does not allow its use in the Micro820 PLC.

It also provides RTC power backup with a supercapacitor or optional battery, to keep the RTC crystal oscillator and clock IC running during any period when the system power is off.

The minimum system requirement in which a module can be installed is a Micro800 Controller with a built-in power supply (or a separate module). Backplane power is provided by the Micro800 Controller.

Section 1.1
General Description
The 2080-SDMEMRTC-SC module provides a slot in the case that allows you to insert a standard Micro SD Flash Memory card. This slot is accessible when the module is installed on the controller.

NOTE

You may plug in the module into slot 1 (the left most slot) and perform Back and Restore operations without any other configuration necessary.

The module is expected to operate indefinitely. It does not require periodic maintenance or calibration. The module is factory calibrated and tested before shipping. The module always starts in the same configuration. There are no parameters than can be set or reset to change the power-up configuration.

Section 1.2
Electrical Specifications

Chapter 2
Installation and Wiring

This chapter will cover:
- Compliance to European union directives
- Power requirements
- General considerations
- Mounting

Section 2.1
Compliance to European Union Directives

This product is approved for installation within the European Union and EEA regions. It has been designed and tested to meet the following directives.

2.1.1 EMC Directive
The 2080-SDMEMRTC modules are tested to meet Council Directive 89/336/EEC Electromagnetic Compatibility (EMC) and the following standards, in whole or in part, documented in a technical construction file:
- IEC 61000-6-4 Electromagnetic compatibility (EMC)–Part 6-4: Generic standards–Emission standard for industrial environments
- IEC 61000-6-2 Electromagnetic compatibility (EMC)–Part 6-2: Generic standards–Immunity for industrial environments

Section 2.2
Power Requirements

The backplane power and the external field power of the device are only to be supplied by an Isolated Secondary Limited Energy Low Voltage source. The module receives power through the bus interface from the +3.3 VDC (3.0 V to 3.6 V)/±24 VDC (19.9 V to 26.4 V) system power supply. Maximum power dissipation is 1.5 Watts.
There is no chassis (earth) ground present on the Micro800 controller. If a chassis (earth) ground connection is needed for a Plug-In Module or devices connected to a Plug-In Module, it must be provided externally.
Section 2.3
General Considerations

The 2080-SDMEMRTC module is suitable for use in an industrial environment when installed in accordance with these instructions. Specifically, this equipment is intended for use in clean, dry environments (Pollution degree 2\(^2\)).

2.3.1 Hazardous Location Considerations
This equipment is suitable for use in Class I, Division 2, Groups A, B, C, D or non-hazardous locations only. The following WARNING statement applies to use in hazardous locations.

<table>
<thead>
<tr>
<th>WARNING</th>
<th>EXPLOSION HAZARD</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning Icon]</td>
<td>• Substitution of components may impair suitability for Class I, Division 2; Class II, Division 2. Do not replace components or disconnect equipment unless power has been switched off or the area is known to be non-hazardous.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• Do not connect or disconnect components unless power has been switched off or the area is known to be non-hazardous. <strong>This module should NOT be installed or removed in an explosive environment.</strong></td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• This product must be installed in an enclosure.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• All wiring must comply with N.E.C. article 501-4(b), 502-4(b), or 503-3(b), as appropriate for Class I, Class II, and Class III equipment.</td>
</tr>
</tbody>
</table>

2.3.2 Prevent Electrostatic Discharge

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Electrostatic discharge can damage integrated circuits or semiconductors if you touch analog module card bus connector pins or the terminal block on the output module. Follow these guidelines when you handle the module:</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning Icon]</td>
<td>• Touch a grounded object to discharge static potential.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• Wear an approved wrist-strap grounding device.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• Do not touch the bus connector or connector pins.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• Do not touch circuit components inside the module.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• If available, use a static-safe work station.</td>
</tr>
<tr>
<td>![Warning Icon]</td>
<td>• When it is not in use, keep the module in its static-shield bag.</td>
</tr>
</tbody>
</table>

\(^2\) Pollution Degree 2 is an environment where, normally, only non-conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is expected.
2.3.3 Remove Power

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>This module is not designed to be hot-swapped and may be damaged if added or removed while power is applied. Remove power before removing or inserting this module.</td>
</tr>
</tbody>
</table>

When you remove or insert a module with power applied, an electrical arc may occur. An electrical arc can cause personal injury or property damage by:

- Sending an erroneous signal to your system’s field devices, causing unintended machine motion.
- Causing an explosion in a hazardous environment.
- Causing an electrical arc. Electrical arcing causes excessive wear to contacts on both the module and its mating connector and may lead to premature failure.

2.3.4 Selecting a Location

Reducing Noise

Most applications require installation in an industrial enclosure to reduce the effects of electrical interference. Analog channels are highly susceptible to electrical noise. Electrical noise coupled to the module(s) will reduce the performance (accuracy) of the module. Group your modules to minimize adverse effects from radiated electrical noise and heat. Consider the following conditions when selecting a location for the analog module. Position the module:

- Away from sources of electrical noise such as hard-contact switches, relays, and AC motor drives.
- Away from modules which generate significant radiated heat. Refer to the module’s heat dissipation specification.

In addition, route shielded, twisted-pair analog input wiring away from any high voltage I/O wiring.
Section 2.4
Mounting

NOTE

- This equipment is considered Group 1, Class A industrial equipment according to IEC/CISPR 11. Without appropriate precautions, there may be difficulties with electromagnetic compatibility in residential and other environments due to conducted and radiated disturbance.
- Be careful when stripping wires. Wire fragments that fall into the controller could cause damage. Once wiring is complete, make sure the controller is free of all metal fragments before removing the protective debris strip.
- Do not wire more than 2 conductors on a single terminal.
- If you insert or remove the expansion I/O module while power is on, an electrical arc can occur. This could cause an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.
- Cable length should be less than 10 meters.

Mounting Dimensions and DIN Rail Mounting

WARNING

To comply with the CE Low Voltage Directive (LVD), all connected I/O must be powered from a source compliant with the following: Safety Extra Low Voltage (SELV) or Protected Extra Low Voltage (PELV).

WARNING

Pour se conformer à la Directive basse tension CE, cet équipement doit être alimenté à partir d’une source ayant les caractéristiques suivantes: très basse tension de sécurité (TBTS) ou très basse tension de protection (TBTP).

2.4.2 Parts List

Your package contains one Micro800 Memory Backup and High Accuracy RTC Plug-In Module and one Quick Start guide.
The module simply plugs into the left-most slot of a Rockwell Micro800 controller.

</tbody>
</table>

#### Section 2.6
**Install Battery in Module**

The module ships with a placeholder for an optional, long-life battery. The battery is used for a long-term RTC operation with power off, or if the module is not installed in a controller. The battery will keep your clock running for a year after power goes out, if you choose to install it. Otherwise, the clock will stop running quite soon after a power outage, about 24 hours.

You need to install the battery in the module before you install the module into the controller. The battery you need to install is a CR1632.
To install this battery:

1. Remove the battery holder. If needed, use a very small screwdriver by placing the flat tip of the blade just inside the corner of the battery holder and gently prying against the module housing by lifting the screwdriver handle up. Do not insert the screwdriver too far into the slot.

   **NOTE**
   
   You may not need to use a screwdriver to remove the battery holder unless the holder has been pushed quite far into the module. The battery works normally with the battery holder extending very slightly out of the house.

2. Repeat until the holder extends far enough out for you to remove the battery and its holder using your fingers. Before removing the battery and its holder completely from the module, note the direction and placement of both battery and holder in the slot.

3. Remove the placeholder battery and replace with the live battery.

4. Re-insert the battery holder in the slot and press until the battery holder is just barely flush with the housing.
Section 2.7
Insert Module
into Controller

| WARNING | This equipment is considered Group 1, Class A industrial equipment according to IEC/CISPR 11. Without appropriate precautions, there may be difficulties with electromagnetic compatibility in residential and other environments due to conducted and radiated disturbance.
This equipment does NOT support hot swap. Do not insert or remove the plug-in module while power is applied; otherwise, permanent damage to equipment may occur. |

Follow the instructions to insert and secure the plug-in module to the controller.

1. Position the plug-in module over the left-most slot of a Rockwell Micro800 controller (slot 1) with the terminal block facing the front of the controller as shown.

2. Snap the module into slot 1 and carefully tighten the screws.

2.7.1 DIN Rail Mounting

1. Before mounting the module on a DIN rail, use a flat-bladed screwdriver in the DIN rail latch and pry it downwards until it is in the unlatched position.

2. Hook the top of the DIN rail mounting area of the module onto the DIN rail, and then press the bottom until the module snaps onto the DIN rail.

3. Push the DIN rail latch back into the latched position. Use DIN rail end anchors for vibration or shock environments.

4. Snap the module into the module bay and carefully tighten the screws.
## Warning

**Hazard of damage to equipment.**

The Spectrum Controls RTB hold down and terminal screws must be tightened by hand using the guidelines in Step 5. They must **not** be tightened using a power tool. Failure to follow these guidelines may result in damage to your connector.

---

**Panel Mounting**

The preferred mounting method is to use two M4 (#8) screws per module. Hole spacing tolerance is ±0.4 mm (0.016 in.). For mounting dimensions, refer to Allen-Bradley 2080 User Manual (2080-PP004):

1. Place the module next to the controller against the panel where you are mounting the module.
2. Marking drilling holes through the mounting screw holes and mounting feet, and then remove the module.
3. Drill the holes at the markings.
4. Replace the module and mount it. Leave the protective debris strip in place until you are finished wiring the module, and any other devices.
Chapter 3  
Configuring the 2080-SDMEMRTC Using CCW

This chapter covers the following subjects:
- How to use Connected Components Workbench (CCW) to configure the Module.
- Setting configuration parameters and associated values.

Section 3.1  
Introduction

The 2080-SDMEMRTC-SC Module is compatible with all controllers that have the capability to host plug-in modules, except, the Micro820 controllers that already have a built-in Micro SD memory feature.

You use CCW software (v. 12.011.05 and above) to configure the module. Your controller firmware must be at v. 12.00.00 and above as well. You then send the configuration setup to the module. Starting from CCW version 12.00.00 and later, the software also provides a module-specific SD Card Utility to configure the module.

Spectrum Controls, Inc. provides a custom configuration software utility that you may use to provide configuration settings to the profile.

Section 3.2  
2080-SDMEMRTC-SC

You use CCW’s SD Card Utility on your personal computer to select an SD Card for transferring firmware for a Micro800 controller to an SD card. The utility is
available in the CCW software.

To access the utility in CCW:

1. Select the **SD Card Utility** option from the CCW Tools menu:

   ![SD Card Utility menu](image)

2. When prompted by Windows User Account Control, to confirm that you wish to run the program, click **Yes** button.

   The SD Card Utility 2.0 window appears:

   ![SD Card Utility window](image)

3. View or specify the following options:
   - **Select SD card.** Displays the drive letter for valid SD cards inserted into the current computer. The SD card must be readable, writable, and have extra storage space to display in the list. Select the SD card that you wish to use from the list
     - **Firmware Selector.** Lists Micro800 controllers that support cards, revision numbers of firmware files, and associated information.
       - **Catalog.** Displays the catalog numbers for Micro800 controllers which support SD cards.
       - **Revision.** Displays the revision numbers of the firmware files.
       - **Size.** Displays the size of the firmware file selection.
   - **Transfer.** Click to copy the firmware file to the SD card.
Section 3.3
CCW Configuration Tab

Before you start, if needed, install the latest version of Rockwell Automation’s Connected Components Workbench (CCW) Standard Edition.

To view module information:

1. From your CCW project, load the module’s Specialty listing into the first <Empty> slot (slot 1) in the Plug-in Modules drop-down list.
2. Once the module information is loaded, to view the module information, click the 2080MEMRTC-SC option:

3. View the following information:
   - **Plug-in Modules.** Shows catalog name of plug-in module.
   - **Vendor Name.** Lists manufacturer of module.
   - **Description.** Describes module function.
   - **Product Type.** Describes product type.
   - **Slot.** Identifies slot in which plug-in module is installed.
   - **Revision.** Lists revision number of firmware.

**Section 3.4 Configuring Module using CCW**

**NOTE**

Backup and Restore functions are not available when your controller is in Run mode. You must switch the controller to program mode before you can access the Backup and Restore options for the module in CCW.
You configure for the module using the utility provided by Spectrum Controls as follows:

1. Select the **Memory Card** option:

![Diagram of Memory Card options]

2. View or specify the following options:
   - **Diagnose**. See Diagnosing Module Issues
   - **Memory Card Settings**. See Configuring Memory Card Settings
   - **Backup to Memory Card**. Backing Up Memory Card
   - **Restore from Memory Card**. Restoring From Memory Card

### 3.4.1 Diagnosing Module Issues

To diagnose module issues, click the **Diagnose** button. Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on setting the real time clock.
3.4.2 Configuring Memory Card Settings

Specify the following options:

- **Load on power up.** (Controller must be offline to access these options):
  - **Load Always.** Load the user program from the 2080-SDMEMRTC-SC plug-in module each time the controller is powered-up.
  - **Load on Memory Error.** Load user program if a memory fault occurs. (Memory faults occur when the user program in the controller is erased or unable to load.)
  - **Disabled.** Default. Do not load the user program from the 2080-SDMEMRTC-SC plug-in module.

- **Include Project & Logical values upon Backup/Restore.** When the check box is selected, project and controller logical values are included when uploading and downloading user programs to and from the 2080-SDMEMRTC-SC plug-in module. Default: Disabled - Cleared.

3.4.3 Backing Up Memory Card

To back up the memory module, click the **Backup to Memory Card** button. Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on backing up the memory card.

3.4.4 Restoring From Memory Card

To restore from the memory module, click the **Restore from Memory Card** button. Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on setting the real time clock.

3.4.5 Enabling Real Time Clock

You use the CCW Controller settings to enable the Memory Card Real Time Clock. The controller must be offline to turn on/off the **Allow real time clock to be changed in run mode** and **Enable firmware real time clock** options.

To access the settings, click the **Real Time Clock** option under **Controller** settings.
The Real Time Clock settings shown here are the default time settings if the Memory Module is not present, or an error occurred on the Real Time Clock:

Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on enabling and setting the real time clock.

3.4.6 Setting Controller Time

To set controller time, the controller must be set to program mode.

Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on setting the real time clock:
3.4.7 Changing Datalogs
To access and change datalogs, the controller must be offline. Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on accessing and changing datalogs:

3.4.8 Changing Recipes
To access and change recipes, the controller must be offline. Please refer to your Allen-Bradley 2080 User Manual (2080-PP004) for information on accessing and changing recipes:

3.4.9 Software Versioning
The software version tracks major and minor revisions for end users. The shipped software version begins at version 1.1. Once released, the major revision is typically incremented if new features are introduced to the product. Otherwise only the minor revision is incremented.

3.4.10 Software Updates
In-field updating of the software by the end user is not supported.

3.4.11 Startup and Factory Default Conditions
After the module boots and before the initial configuration is received, the module holds the default configuration as specified in the Configuration Assembly.
Technical Assistance

Note that your module contains electronic components which are susceptible to damage from electrostatic discharge (ESD). An electrostatic charge can accumulate on the surface of ordinary plastic wrapping or cushioning material. **In the unlikely event that the module should need to be returned to Spectrum Controls, please ensure that the unit is enclosed in approved ESD packaging (such as static-shielding / metalized bag or black conductive container).** Spectrum Controls reserves the right to void the warranty on any unit that is improperly packaged for shipment.

RMA (Return Merchandise Authorization) form required for all product returns.

For further information or assistance, please contact your local distributor, or call the Spectrum Controls Technical Support at:
