1756sc-CTR8/1756sc-CTR8K 8-Channel Counter Input Module

The 1756sc-CTR8/1756sc-CTR8K Counter Input Modules provide high-density input capability for general purpose counter and turbine flowmeter applications that need a large number of input channels in one I/O module. The 1756sc-CTR8K module is conformally coated. The 1756sc-CTR8 modules can replace lower-density counter input modules without compromising performance or price.

- Eight incremental, 24-bit, single-ended counters or up to four pairs for up/down or quadrature counters. Count direction flags; start, stop, reset, and preset control.
- Configure each input group as 5, 12, or 24 VDC, or 50, 200 mVpp counters, or as turbine flow (variable reluctance coil) AC inputs; input signal range is from 0 to 65 kHz.
- Provides scaling K factor for turbine flowmeters; can be setup for flowmeter proving requirements. For counting applications, can count incremental inputs up to 65 kHz.
- Four external counter-enable lines for faster counter control.
- Provides scaling of input counts or input frequency to engineering units.
- Simultaneous frequency/counter display; Limit and zero flags to detect rollover, roll-under.
- Count and rate measurements may be multicast to other processors at intervals as short as 10 ms.
- Easy to configure using Studio 5000 programming software, add-on profile (AOP) available.
